[Description](#)

The standard behaviour for fields on Windows 8.x is that they display a colorised border while they are active. This behaviour is similar to the behaviour of fields on Mac OS X. While this works with LiveCode on Mac OS X, it doesn't work on Windows 8.x. The focusBorder of fields is never visible.

[Comment 1](#)

Hi Mark,

thank you for logging this report.

We have now confirmed the bug in your bug report and will continue to update you as the status of this issue changes.

This issue also seems to impact Windows 7, where the border highlights in a very subtle blue.

Kind Regards,

Hanson
