[Description](#)

When building an LCB extension the Extension Builder does not show the default script or User Guide even if they are present.

It looks like the array displayExtensionData uses has been updated with file paths in the defaultscript_file and guide_file elements but displayExtensionData is looking for defaultscript and userguide elements.

[Comment 1](#)

As per request from "This week in Livecode"

<https://github.com/livecode/livecode-ide/pull/2156>

Elanor did all the hard work for this pull-request. I just applied the changes in the pull-request.

[Comment 3](#)

Hello all,

This bug is fixed in LiveCode 9.6.3 RC-1:

<https://downloads.livecode.com/livecode/>

Kind regards,

Panos
