[Description](#)

Seen in 9.6.5-rc1 without Pro addons.

When deploying to an Android device using the Test button there are issues if Script Debug Mode is turned on.

This is demonstrated by the sample stack. It attempts to use jsonArray which is not available.

The root of the issue is the Remote Debugger attempting to initialize when it is not available.

A workaround is to turn off Script Debug Mode before using the Test button.

[Comment 4](#)

Hello all,

This bug is fixed in LiveCode 9.6.5 RC-2.

You can find it in your LiveCode account area, or download it from here: <https://downloads.livecode.com/livecode/>

Kind regards,  
Panos
