[Description](#)

Please see the URL

http://yokotafumitaka.cocolog-nifty.com/photos/photo_image/revolution003.png

When you type over 256 Japanese characters of one line text into a text field, a new type makes a underline with before characters.

Might be a related bug:

put a cursor into middle of the text, then select all. only after the cursor of characters are selected.

2.9.0-gm-1

[Comment 1](#)

Hi Kenji,

Thanks for the report.

I can confirm that there do some to be some strange effects when using input methods to enter Chinese/Japanese.

Warmest Regards,

Mark.
